Unifying the Problems

Predict New Edges: $\mathbb{1}\{i \sim j\} = f(\mathbf{x}_i, \mathbf{x}_j)$ Classify New Observations: $\mathbb{1}\{i \in v\} = f(\mathbf{x}_i)$

Unifying the Problems

Predict New Edges: $1\{i \sim j\} = f(\mathbf{x}_i, \mathbf{x}_j)$ Classify New Observations: $\mathbb{1}\{i \in v\} = f(\mathbf{x}_i)$

Instead Predict Similarities:

$$S_{\mathcal{G}}(i,j) = f(\mathbf{x}_i, \mathbf{x}_j) + \epsilon_{ij}$$
$$= g(S_x(i,j)) + \epsilon_{ij}$$

Simple fitting: $\min \sum_{i,j} (S_{\mathcal{G}}(i,j) - c_{ij}S_x(i,j))^2$

∜

Unifying the Problems

Predict New Edges: $1\{i \sim j\} = f(\mathbf{x}_i, \mathbf{x}_j)$ Classify New Observations: $\mathbb{1}\{i \in v\} = f(\mathbf{x}_i)$

(日) (日) (日) (日) (日) (日) (日)

Instead Predict Similarities:

$$S_{\mathcal{G}}(i,j) = f(\mathbf{x}_i, \mathbf{x}_j) + \epsilon_{ij}$$

= $g(S_x(i,j)) + \epsilon_{ij}$

Simple fitting: $\min \sum_{i,j} (S_{\mathcal{G}}(i,j) - c_{ij}S_x(i,j))^2$

∜

Regression Model: $\mathbf{y} = \mathbf{C}\mathbf{x} + \boldsymbol{\epsilon}$

Constraints on C (Reduced Rank Regression):

- Low rank
- Uncorrelated

Maximize similarity between clouds of data (RV-Coeff)

Transform $\mathbf{S}_x \quad o \quad \widehat{\mathbf{S}}_\mathcal{G}$,

$$\max\left< \mathbf{S}_{\mathcal{G}}, \widehat{\mathbf{S}}_{\mathcal{G}} \right>$$

- Gives interpretation of relation between data and graph
- Use for exploration

Regularization and Kernel Methods

- Clear S_G, S_x define kernels: Kernel CCA, PLS, RRR Yamanishi et al. (2004): yeast data
- Previous formulation: unregularized kernel RRR
- Implement trade-off between (empirically) uncorrelated features and the norm of the features

⁽Bach and Jordan, 2002; Rosipal and Trejo, 2001; Purdom, 2006) 🗉 🛌 💿 🧠 🕑

Regularization and Kernel Methods

- Previous formulation: unregularized kernel RRR
- Implement trade-off between (empirically) uncorrelated features and the norm of the features

• If
$$x = \mathbf{x} \in \mathbb{R}^n$$
, $\mathbf{X} \in \mathbb{R}^{n \times p}$, $\mathbf{K}_X = \mathbf{X}^T \mathbf{X}$

Kernel CCA/RRR $(\mathbf{K}_{\mathcal{G}}, \mathbf{K}_X) \quad \Leftrightarrow \quad \text{Generalized PCA} (\mathbf{X}, \mathbf{Q}, \mathbf{S})$

(For appropriate regularization of Kernel CCA)

(ロ) (同) (三) (三) (三) (○) (○)

In Summary

- Computationally simple ways of using large graphs
- Automatically picks features of the data
- 'Smooths' data rather than explicitly limit analysis to graph

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ - 三 - のへぐ

In Summary

- Computationally simple ways of using large graphs
- Automatically picks features of the data
- 'Smooths' data rather than explicitly limit analysis to graph

(日) (日) (日) (日) (日) (日) (日)

- Adjacency matrix not deal with moderate details Directed Edges Different Nodes
- ► Eigenvectors ≠ subnetworks
 - \Rightarrow Kind of approximation, but not explicit
