Clinical Research Training Program

This project implements a two-year program of training in clinical research. It features a core curriculum of three graduate-level courses in biostatistics and epidemiologic methods, a one-year course on essentials of patient-oriented research, and two year-long seminars, one on hypothesis generation and experimental design, the other on the quantitative methods as they are applied in clinical investigation. The curriculum balances didactic training to develop fundamental research skills with practical training to enable trainees to use these skills effectively.

Role: Program Co-Director, Seminar Director

IBD Genetics Consortium Data Coordinating Center

This proposal was submitted in response to a request for application to establish a data coordinating center (DCC) and DNA/cell line repository for an Inflammatory Bowel Disease Genetics Consortium to be administered through the University of Chicago. The DCC will collect and analyze genotypic and phenotypic data collected from six separate genetic research centers.

Clinical Scholars Program

The major goals of this program are to conduct the Robert Wood Johnson Clinical Scholars Program at the University of Chicago. This is a two-year post-residency academic program that trains Foundation-selected Scholars to apply research methods to health-related problems. The priority areas of focus of the Chicago program are: “The Social, Cultural and Demographic Contexts of Health” and “The Efficient and Ethical Use of Health Care Resources.”

Hemicraniectomy for Swelling from Cerebral Infarction

To test the hypothesis that hemicraniectomy and durotomy (H&D) with standard medical therapy (SMT) improves the chances of favorable survival (modified Rankin > 4), relative to standard medical therapy alone, in patients with life threatening swelling from large supratentorial cerebral hemispheric infarctions (LSCHI).
